

Offshore Inspection and Maintenance Services

Challenge

To carry out statutory inspection surveys and maintenance on lifting, safety and pressure equipment in accordance with LOLER SI 2307/1998, PUWER SI2306 and PSSR 2000 regulations. Carry out load testing on various items of lifting and safety equipment.

Solution

- Provide expert inspection services for assets that are key to safe and efficient energy industry operations
- Project management, planning and execution
- Identification and reporting of defective equipment
- Maintain safe methods of work
- Delivery of inspection and maintenance data
- To provide full equipment certification, management and tracking system

Results

- Comprehensive reporting
- Maintaining safe systems of work during inspection, maintenance and lifting operations

Maximising Our Value

- Online certification management system
- Maintaining client's safety culture
- Reduction in offshore remedial works
- Provide technical advice and assistance
- Completing work scopes within designated timescales
